1. Overview

JABS is a web based command scheduler and execution system. Commands are added to a project as tasks. A project can either be scheduled and/or executed manually by a user. The results from executing a project are persisted and can be emailed to team members or other interested parties.

JABS

2. Status

JABS 0.7.0 was released on 5/18/08.

3. Requirements

JABS requires JDK 5.0 and Tomcat 5.5 or above. The release versions are bundled with Apache Tomcat 5.5 and are ready to run.
