1. Overview

When you configure a JABS install for the first time, several example projects will be loaded. This section will cover any additional reference information for the examples.

2. Example 1

This example will cover the basic steps required to configure and run a project. It will use a `dir` command to list some directories. The output from the list will be checked for different string values and reported as errors and warnings.

3. Example 2

Same as example 1 for Unix systems.

4. Example 3

Same as example 1 for Cygwin installations.
